These requirements are for the safety of our school and for your personal health. Screening for tuberculosis is recommended by health professionals for any individual who is at risk. Routine screening, using a Mautoux tuberculin skin test or a TB blood test, such as the Quantiferon Gold TB Test, can detect if a person has been exposed to tuberculosis. Early identification of infection and completion of a course of antibiotic treatment significantly reduces the chance of developing active TB disease over the lifetime of infected individuals.

If you have any questions about your risk of infection, please speak with your healthcare provider or plan to discuss it at your next examination. For additional information, you can contact the Delaware Division of Public Health TB Elimination Program at 302-744-1050.
