

Committee minutes

Facilities Committee	
12.9.2019	6:00 PM
Baltz Conference Room	
Meeting called by	Ted Ammann
Type of meeting	Monthly Meeting
Facilitator	Marcin Michalski
Attendees	Marcin Michalski, Ted Ammann, Monte Perrino, Kalli Butt, Martin Wilson
Public Comment	
Discussion	No public comment
Approval of Minutes	
Approval of minutes	The committee approved the notes from the September 2019 meeting.
ESCO Report	
Update	Marcin shared the most recent monthly report and explained the process used to address the most impactful issues. Additionally, the committee reviewed actual energy expenditures over the last ten years. While the yearly ESCO reporting is weather normalized and accounts for variations in facility use, the actual expenditures confirms the downward trend of our energy spend. The combined elec. And gas expenditure in 2009 was \$4,081,936.15 and the 2019 expenditure was \$2,641,280. While there has been some fluctuation in the intermediary years, the actual expenditure confirms the ongoing efficiencies we've realized.
Minor Cap	
Update	Marcin shared the current budget for FY20 minor cap funds that were recently loaded (these become available after the property tax receipts come in). He also shared the principal minor cap requests that have been received thus far - its still early as principals are asked to submit these by February. While all of the requests are reasonable, there was discussion about the mix between major cap and minor cap. With the last major cap project completed and the next one years down the road, its critical that we manage minor cap funds for keeping building systems operational. This means that some "non-critical" projects will need to be deferred.
Clean Campus Awards	
Update	Ted reminded the committee about the Clean Campus awards and the expansion to recognize two custodians each month. The recognitions are supported by Imperial Dade a supplier of custodial products.

Red Clay Consolidated School District

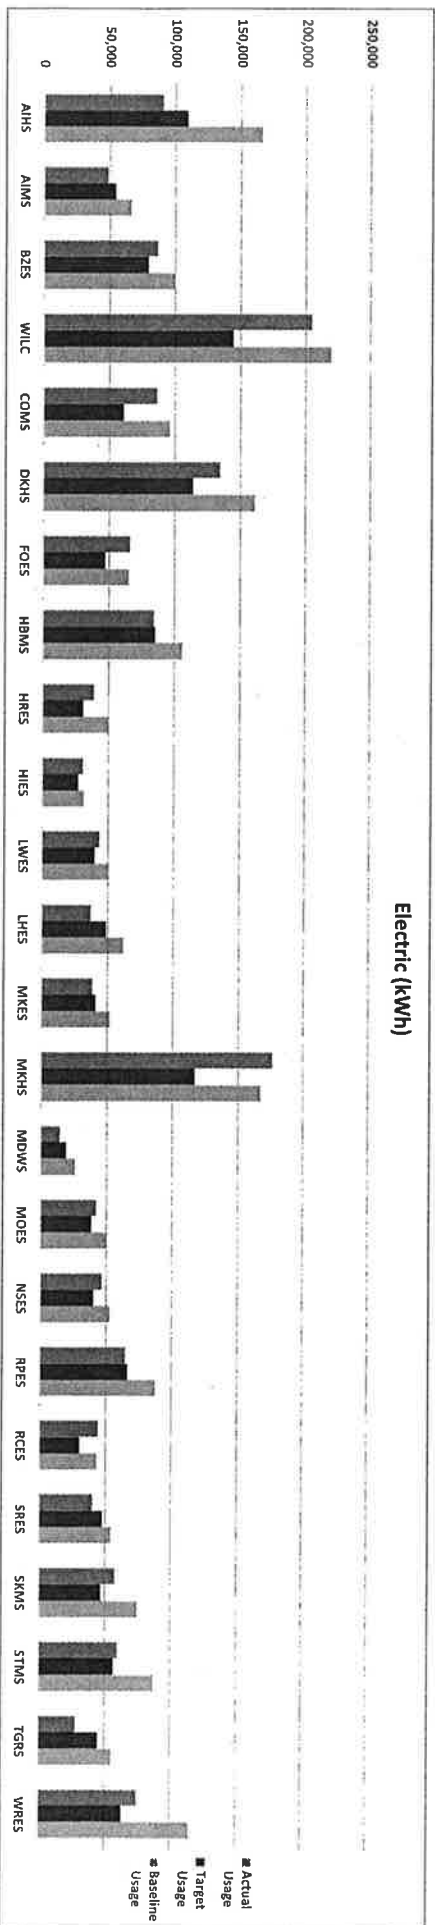

Monthly Energy Usage Progress Report

October 2019

RED CLAY CONSOLIDATED SCHOOL DISTRICT ELECTRIC REPORT OCTOBER 2019

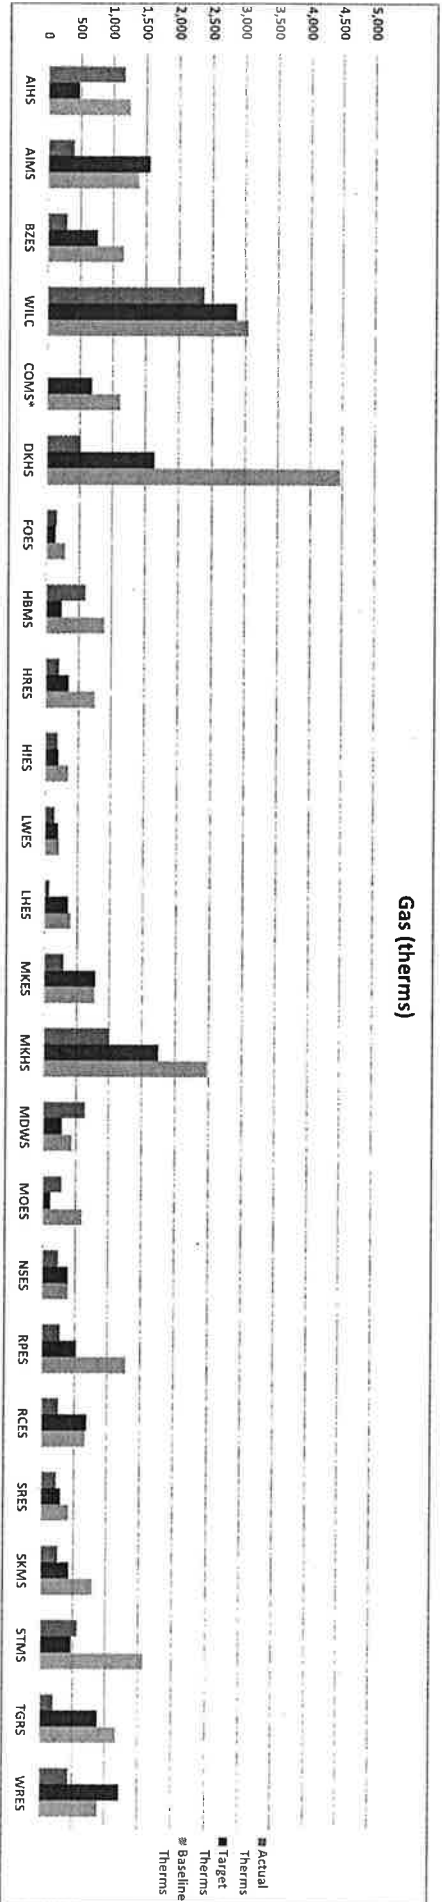

The graph and chart below display the kWh energy performance at a building level analysis. The data used is being collected by the submeters at each location. These numbers will likely vary from the billed utility data but will not exceed a variance of greater than 5%. The schools that lack "Actual kWh" values experienced communication errors from the sub-meters, causing the data to be omitted.

RED CLAY CONSOLIDATED SCHOOL DISTRICT GAS REPORT OCTOBER 2019

The graph and chart below display the Therm energy performance at a building level analysis. The data used is being collected by the submeters at each location. These numbers will likely vary from the billed utility data but will not exceed a variance of greater than 5%. The schools that lack "Actual Therms" values experienced communication errors from the sub-meters, causing the data to be omitted.

Term Definitions

Actual Usage	This is the amount of kWh that the submeter has read for the duration of the reporting period.
Baseline Usage	This is the amount of pre-project usage as defined in the contract. There have been no adjustments for weather made to these figures.
Target Usage	This is the amount of kWh that is specified in the contract as the new usage. There have been no adjustments for weather made to these figures.
Difference	If this number is negative, the target has not been met. If this number is positive, the target has been exceeded.
% Difference	This is the percentage of variance between the target usage and the actual usage.

Additional Information

Data Qualification:

- The data used in creating this report is taken directly from the sub-meters at each location, and does not reference the utility bills at any point
- The data has been Weather-Normalized using monthly weather data and the weather normalized equations developed for the corresponding billing periods. This will differ from the annual reconciliation report.
- The data has not been adjusted for the following items:
 - Schedule compliance – any deviations of operations outside of the parameters listed in Table 7 above with regards to equipment runtime
 - Temperature Setpoint compliance – any deviations of operations outside of the parameters listed in Table 7 above with regards to temperature setpoint
 - Non - Routine Adjustments (Static Factors) – these are described as permanent changes made to the building. (for example, a new wing was added)
 - Routine Adjustments – these are described as temporary occurrences that will effect building consumption but not change the building permanently. (for example, a wing was shut down for construction)

RCCSD – Reoccurring Compliance Issues as of 11/1/19
